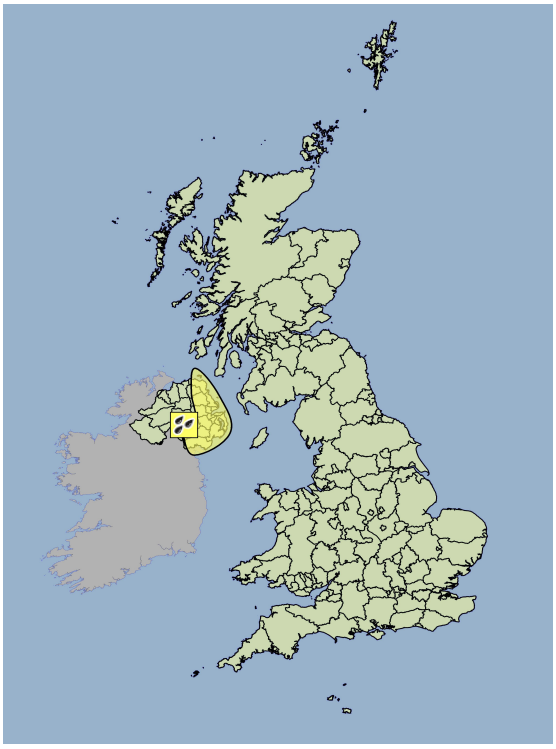
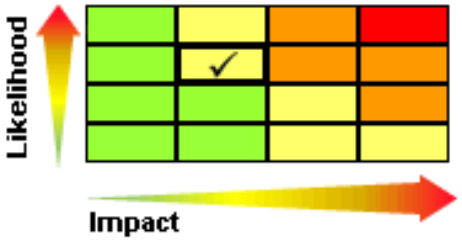
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal zone will be slow-moving close to Northern Ireland for much today, clearing slowly eastwards this coming night. After a drier interlude though much of today, a wave on the front may bring a further spell of heavy rain this evening. A further 15-20 mm of rain could occur locally.

There is a good deal of uncertainty about this development and it remains possible that the worst of the rain may pass to the east.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **18:00 on Thu, 03rd Apr 2014** until **23:55 on Thu, 03rd Apr 2014**

Heavy overnight rain is expected to clear away northwards from Northern Ireland this morning. However, further heavy and persistent rain may return to eastern parts of Northern Ireland this evening, clearing away during the early hours of Friday.

The public should be aware that this may bring the risk of localised surface water flooding.

There is a good deal of uncertainty regarding developments and this warning will be kept under review.
